May 2025 – Present
Frankfurt, Germany (Remote)
ETM Passport
Enterprise Digital Product Passport platform on microservices.

April 2026 – June 2026
Frankfurt, Germany (Remote)
MitaMed
Enterprise-grade real-time driver and vehicle tracking system.

Sep 2025 – May 2026
Berlin, Germany (Remote)
PANTOhealth
Enterprise IoT railway monitoring and predictive maintenance platform.

Oct 2025 – Jan 2026
Boston, USA (Remote)
Selltory
E-commerce / Sales infrastructure platform.

Backend Engineer

- Developed core services for a distributed NestJS microservices architecture (15+ services) utilizing RabbitMQ for async communication.
- Implemented secure authentication/authorization leveraging JWT, session management, RBAC, and ABAC.
- Built high-performance REST APIs via API Gateway and orchestrated Docker-based microservices deployments.
- Designed automated CI/CD pipelines, integrating Redis for caching/rate-limiting and MinIO for secure S3 storage.

Backend Engineer

- Designed and implemented a real-time live monitoring platform and bidirectional WebSocket gateways using Socket.IO.
- Implemented high-performance live driver tracking using Redis GEO location services (GEOADD, GEOSEARCH, GEORADIUS).
- Built a Direct Chat service supporting one-to-one messaging with real-time event delivery and Redis Pub/Sub distribution.
- Designed scalable backend services following Hexagonal Architecture and integrated MinIO for media uploads.

Backend Engineer

- Developed backend services for railway monitoring systems and built optimized MongoDB queries for processing high-volume IoT sensor data.
- Implemented advanced Redis caching strategies to improve application performance and throughput.
- Integrated AWS S3 for scalable cloud object storage and designed RabbitMQ-based asynchronous workflows.
- Built and maintained CI/CD pipelines for automated testing and managed Dockerized production environments.

Backend Engineer

- Developed backend services using NestJS and Apollo GraphQL Server for order management, product catalog, and customer operations.
- Designed efficient GraphQL schemas and resolvers mechanisms, and improved API response times under high traffic.
- Collaborated with cross-functional teams to build scalable, maintainable, and production-ready backend services following microservices best practices
- Optimized database performance, introduced caching

Architecture & Messaging:

Microservices, Hexagonal Architecture, Clean Architecture, Domain-Driven Design (DDD), CQRS, Event-Driven Architecture, API Gateway Pattern, RabbitMQ, Redis Pub/Sub.

Backend & DevOps:

Node.js, NestJS, Express.js, TypeScript, JavaScript, REST API, GraphQL, WebSocket (Socket.IO), Docker, Docker Compose, CI/CD (GitHub Actions), Linux, Nginx, AWS S3, MinIO.

Databases & Testing:

PostgreSQL, MongoDB, MySQL, Redis (Redis GEO), TypeORM, Jest, Unit & Integration Testing.

CodeNight
2024

- Backend Engineering Bootcamp
- Intensive backend training covering Node.js, NestJS, TypeScript, REST APIs, GraphQL, PostgreSQL, MongoDB, Redis, RabbitMQ, Docker, Microservices, Authentication, Security, Testing, and CI/CD, with hands-on development of production-style projects including Digikala, Divar, and SnappFood backend systems.

2021 – 2025
Karaj, Iran

Azad University

Bachelor's Degree in Software Engineering (B.Sc.)
